

Mountain Gold™
100% NATURAL
HIMALAYAN CRYSTAL SALT

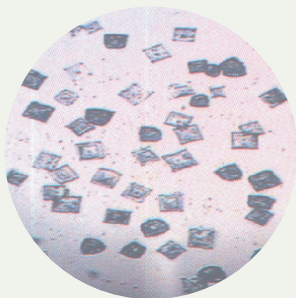

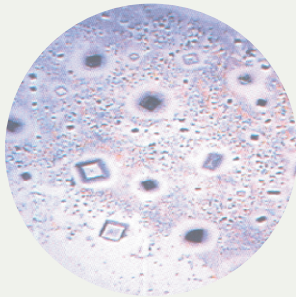

TABLE SALT

PICTURE 1 of TABLE SALT

shows how the decomposition during the refining process has torn the crystalline components from their framework - their natural symbiosis, and isolated them.

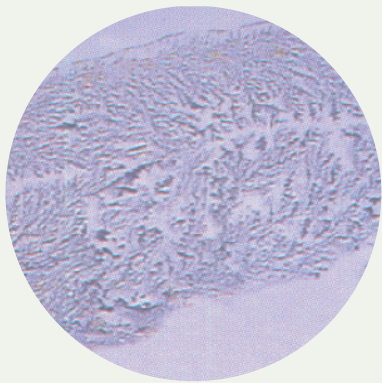

SEA SALT

PICTURE 2 of SEA SALT

shows sea salt to be a combination of crystal salt and table salt - irregular and isolated crystalline structures disconnected from the natural elements surrounding them.

Turn over for **himalayan salt**.

Mountain Gold™
100% NATURAL
HIMALAYAN CRYSTAL SALT

CRYSTAL SALT

PICTURE 3 of
ORIGINAL HIMALAYAN CRYSTAL SALT

shows salt as it was meant to be. The sodium chloride components are left in combination with the other elements that make up the natural world, the elements we need to survive.

The elements that are trapped within the crystal salt are in particles small enough to be able to penetrate the human cells and be metabolized. Whatever cells do not absorb cannot be metabolized and consequently is useless to the body.

Original Himalayan Crystal Salt is essentially sea salt as it once was thousands of years ago - before oil tanker accidents and elevated mercury and cadmium levels - and unrefined.
